

Transfer of Technology

The Institute organizes "Field-days" at regional stations and sub-stations that are participated by the farmers and the extension workers. In addition, the On-farm Research Division has been playing an important role in the transfer of technology. Moreover, the Institute has established 26 Technology Villages under different agro-ecological regions of the country in order to transfer BARI developed technologies by establishing greater bondages between scientists and farmers.

Dissemination of information for transfer of technology is accomplished through different kinds of publications, such as manuals, monographs, leaflets, booklets, pamphlets, reports, newsletter, and journal. The Institute scientists most frequently take part in promotional, motivational and problem oriented discussion on agriculture in the national broadcasting through radio and television. BARI also disseminates information through its web site (www.bari.gov.bd).

The library serves as a centre for books, journals, references and other materials. Workshops, group discussions and seminars are regularly held that help identify new problems and develop new programmes. Short training courses on the production technology on different crops and on various subjects, such as survey, methodology, pest management, and cropping systems, etc. are periodically organized for the extension workers and the scientists.
